**PARTITION PANEL**

**SHARED TABLE PARTITION**

The overwhelming majority of products being offered are made simply out of a plexi panel as well as a plexi base. This fabrication is okay for home-office use, but in a real world application, time and time again these products have failed. They are wobbly, weak, and unreliable. In contrast, all our products incorporate aluminum frame and/or base, which provides structure, durability, and a means to safely secure the panel so that it is not a liability.
